PAST.
ASTRONOMIC HISTORY
OF KOZYREV'S
INVESTIGATION OF THE
MOON

Kozyrev N.A

Experiments with star's body

- While conducting astrophysical observation for star –object M31 using telescope with aluminum screen, N.A.Kozyrev has fixed for a star signal, specific not only in the present but also in the past and future its positions.

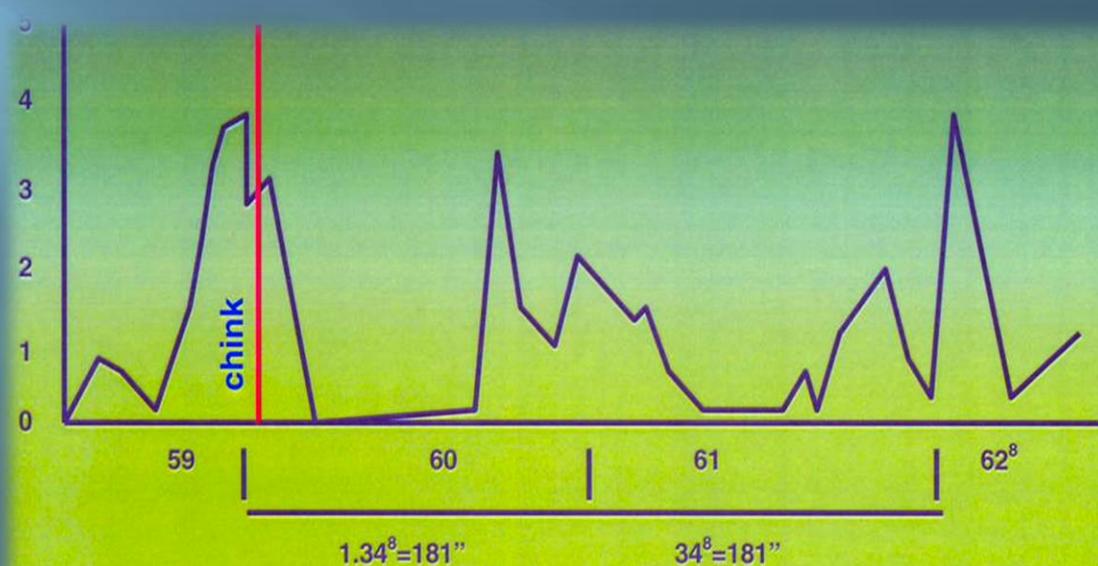

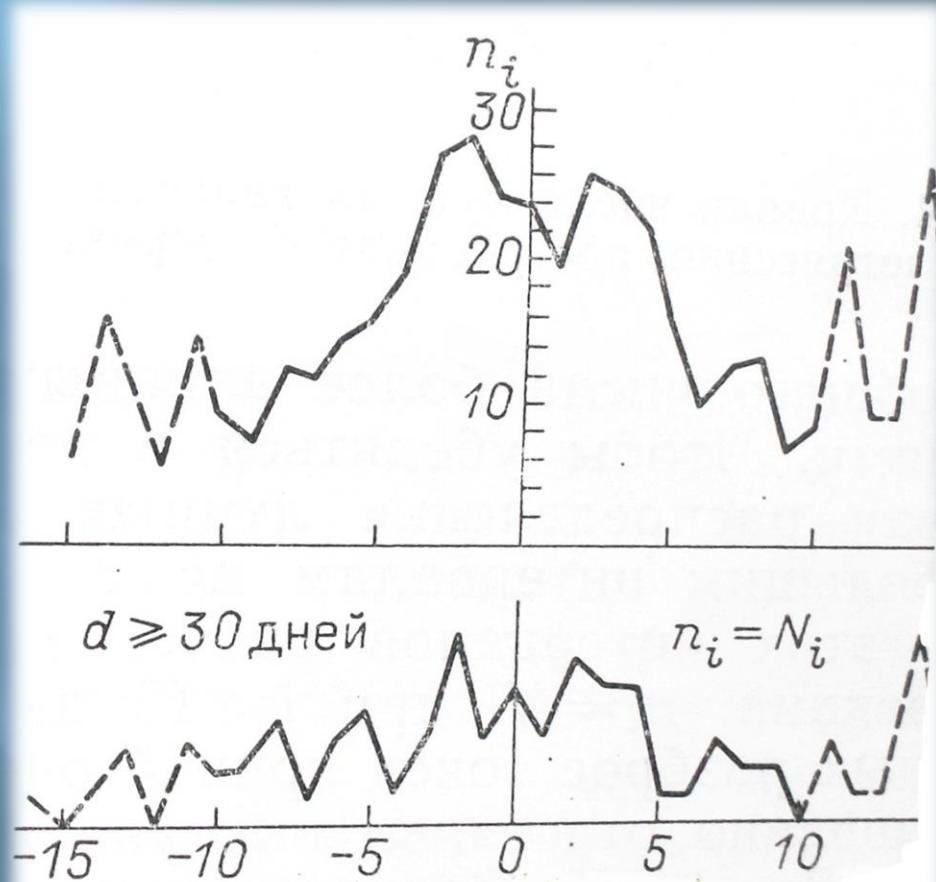

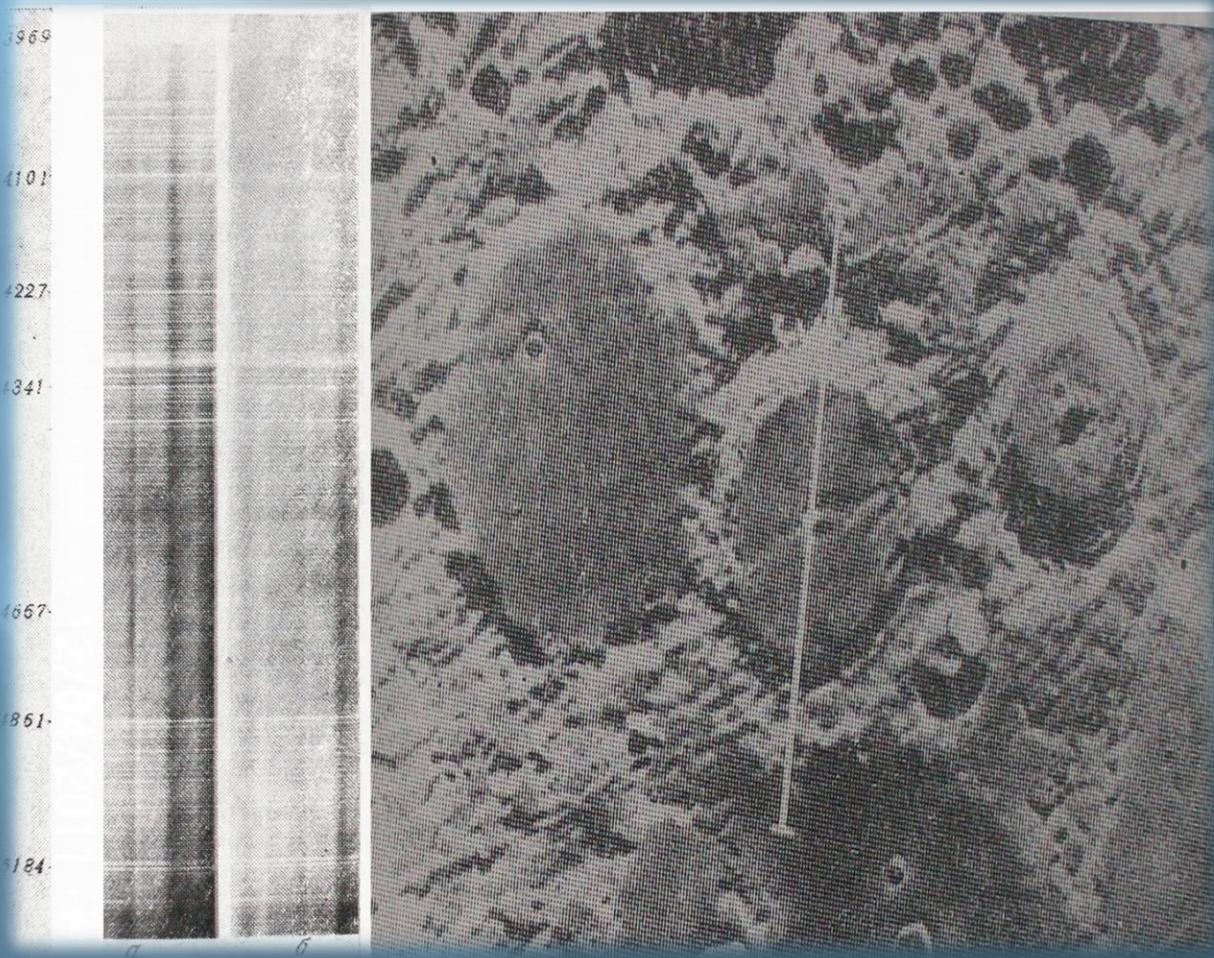

Figure 1. Profile of activity of Andromeda nebula M31 on (a) at different positions of the centre of it's visible representation.

On co-ordinate axis there are changes of galvanometer reading, and on abscissas' axis there are the corresponding readings of micrometer(according to N.A.Kozyrev,1980)

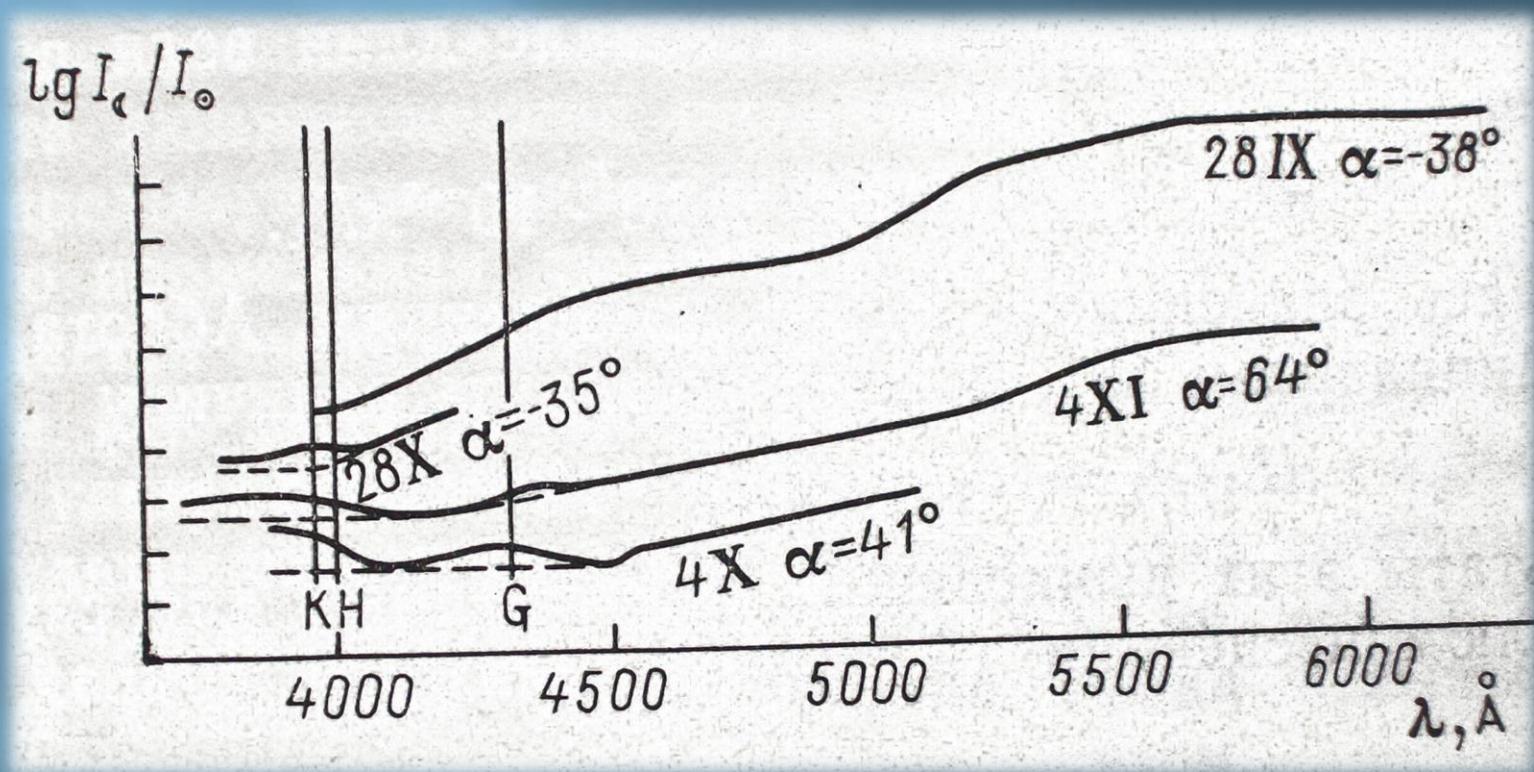

The dependence of the numbers of the Earthquakes and the number of Moon lightappereances

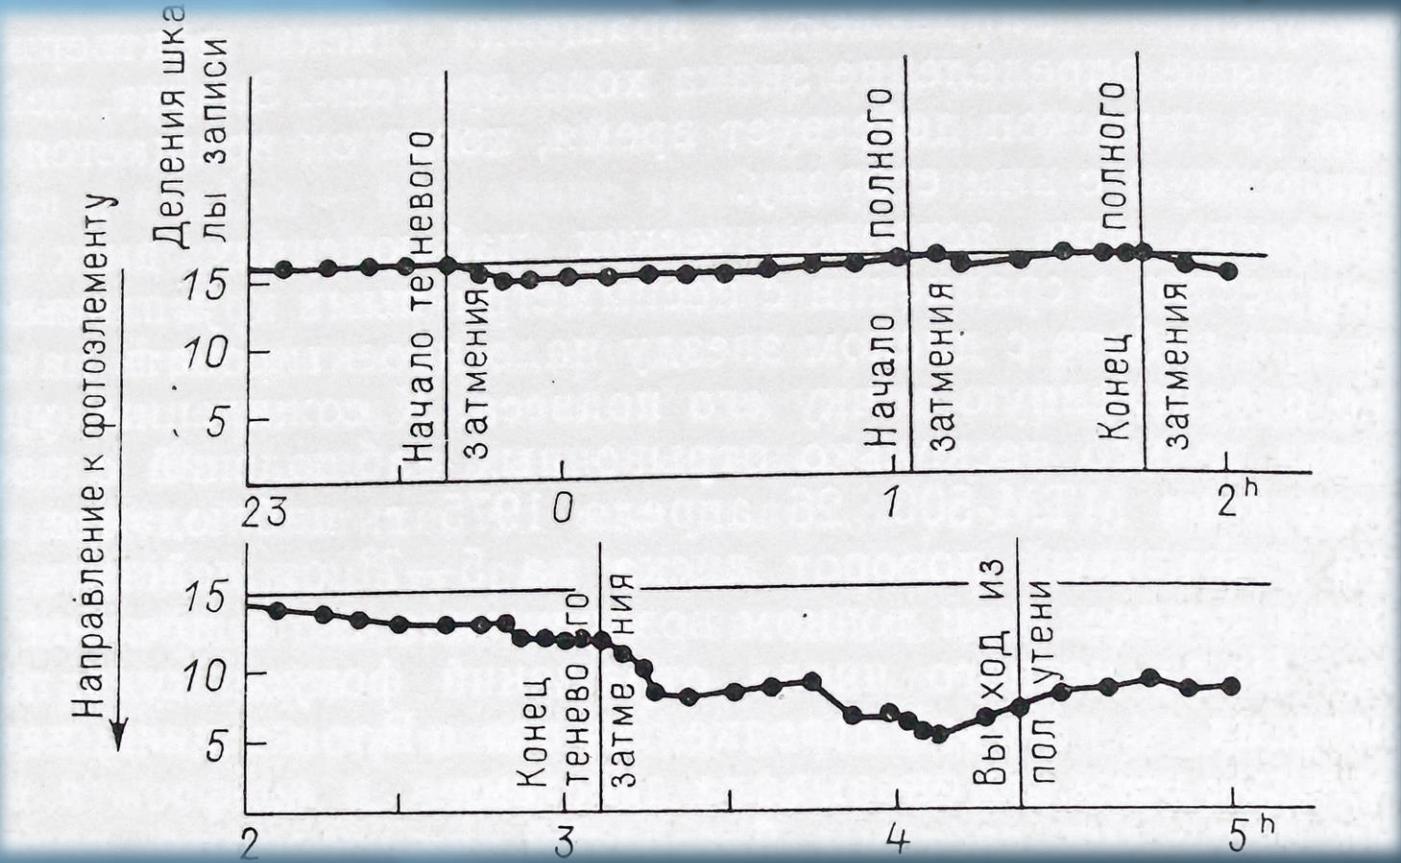

Moon's volcanos: the crater Alfons spectrum.

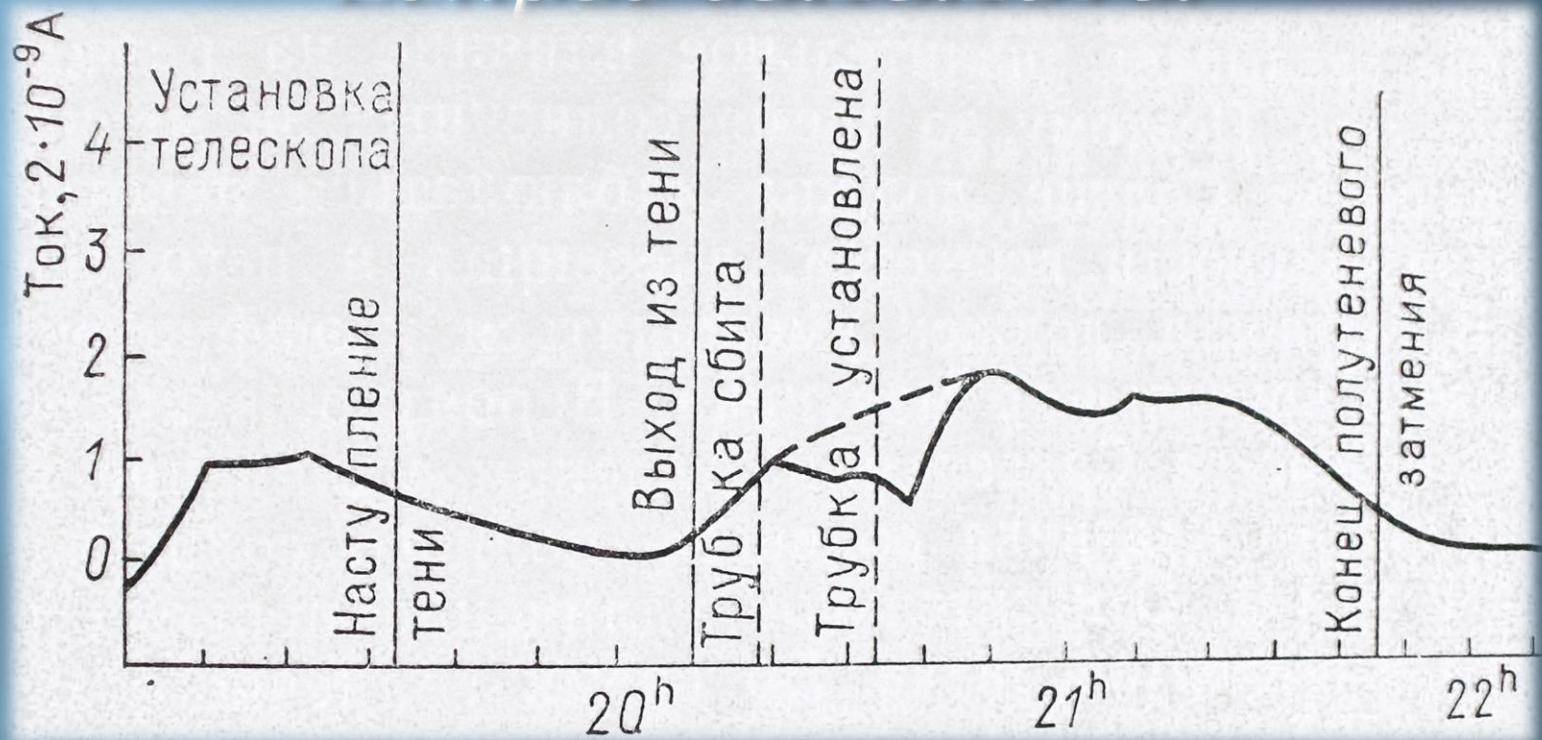

The light reflected capability of the Moon's crater Aristarch.

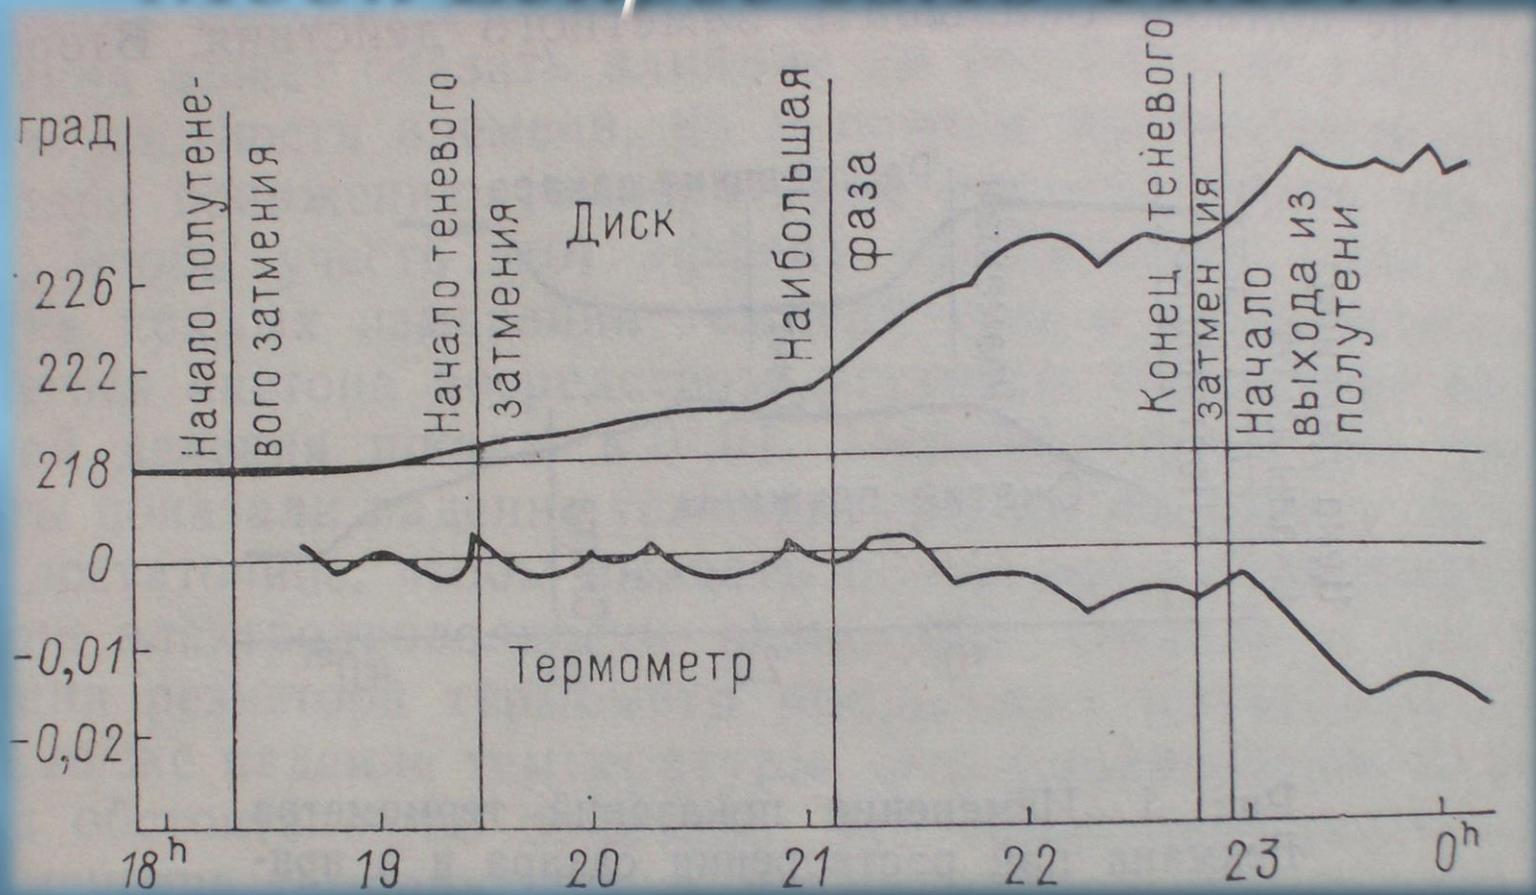

The dynamics of the action of the photo-element on the torsion balance during Moon Eclipse

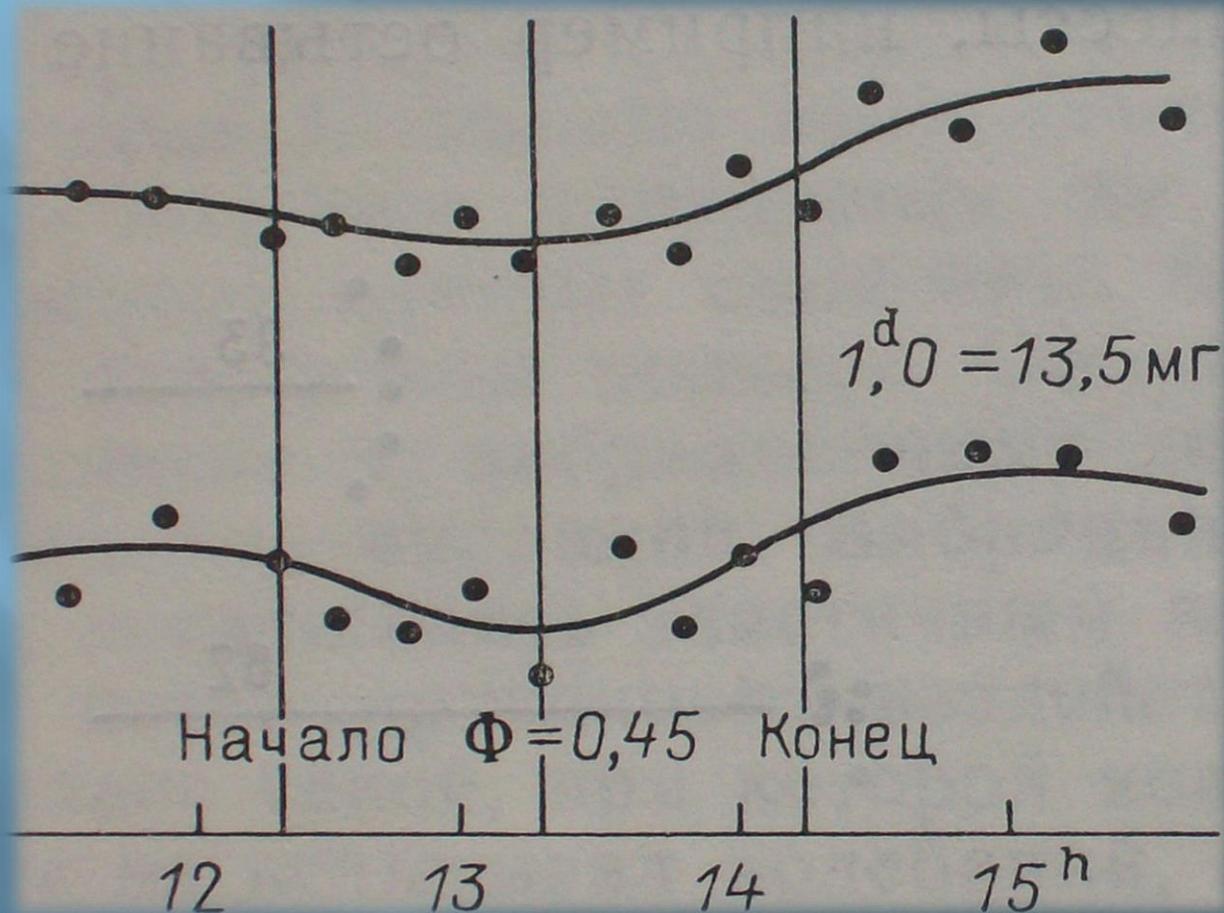

The dynamics of resister's electroconductivity during Moon Eclipse 05.13.1976.

The dynamics of Bacon thermometer's parameters during Moon Eclipse 03.13-14.1979.

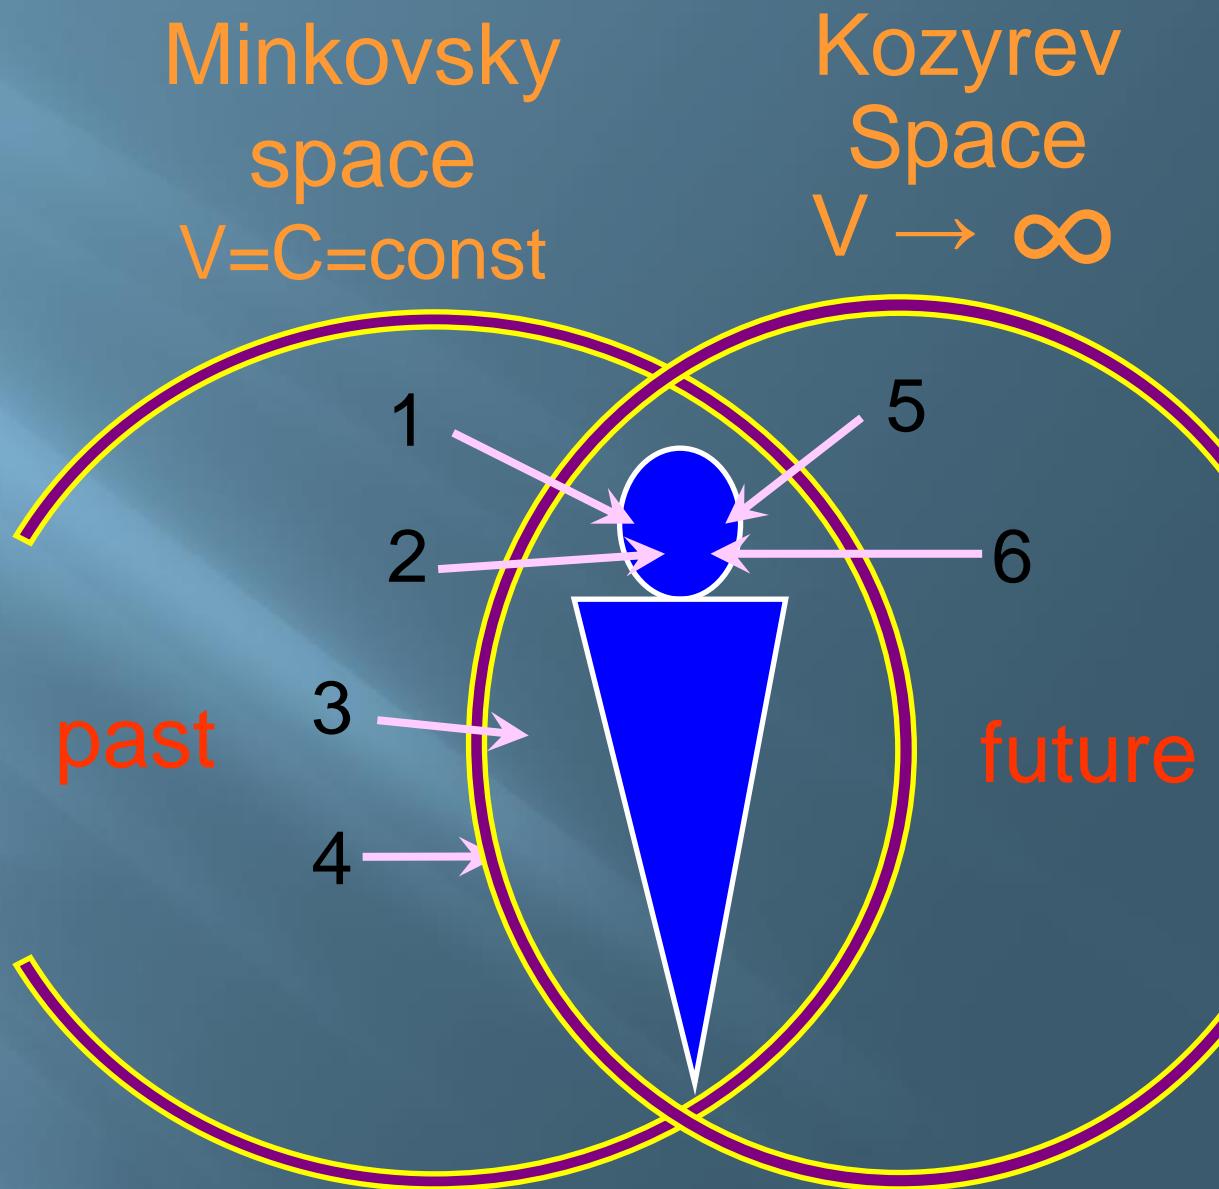

The dynamics of Kozyrev's weight-effect during the Sun Eclipse 02.25.1971

*ISRICA INVESTIGATION
OF THE SYSTEM "SUN-
MOON" DURING 1990-
2009 YEARS*

According to Academician V.P.Kasnacheev, a living substance on the Earth, a human, his brain are in zone projection of two spaces: Minkovsky-Einshtein traditional physical world and Kozyrev's space, where Time has various movement and density.

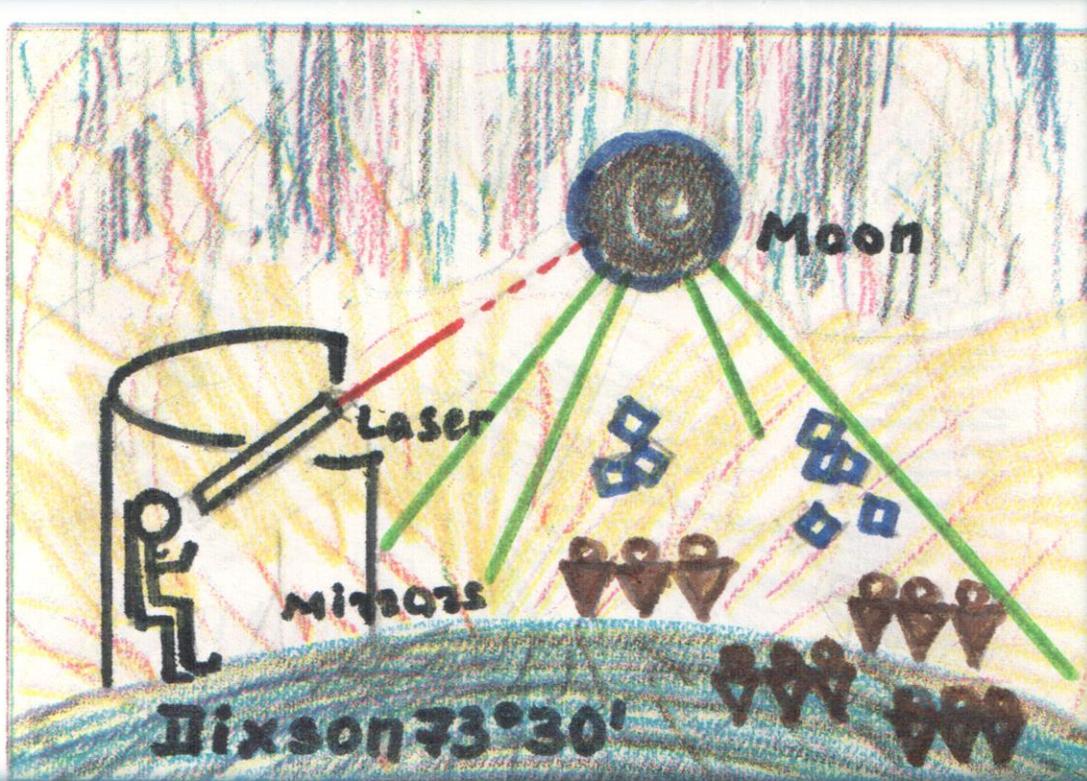

- 1 — Consciousness level (Aristotle lope); 2 — Subconsciousness level (Boyes logic);
3 — 'Basements' of consciousness; 4 — Man's coiporality supporting the consciousness;
5 — Metalevel (cosmic consciousness); 6 — 'Basements' of cosmic consciousness.

Based on Kosyrev's ideas, in 1989 in International SRI of cosmic anthropoecology some metallic screens for "energy-time" flows, irradiated by a human, have been designed. They are named as "Kozyrev's mirrors"

The scheme of the synchronous experement with “mirror-laser-moon” initiation into informational field of our planet and human consciousness

5 minutes were left before translation of information by specially trained operator, when a computer occasionally has chosen three symbols among 77 possible ones. It was the program of distant transmission without using traditional technical means from mirrors zone with condensed time, opening rapid access to some point of Universe and our planet.

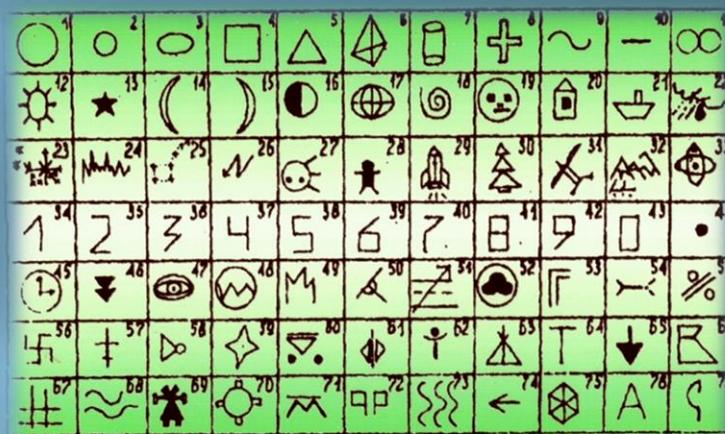

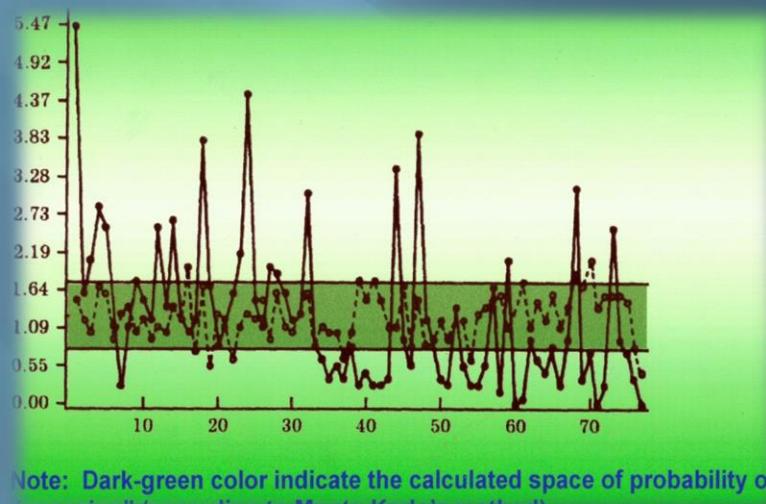

Fig. Image-symbolic "constructor" composing 77 elements of different cultures, epochs and nations used in the investigations of transpersonal communications

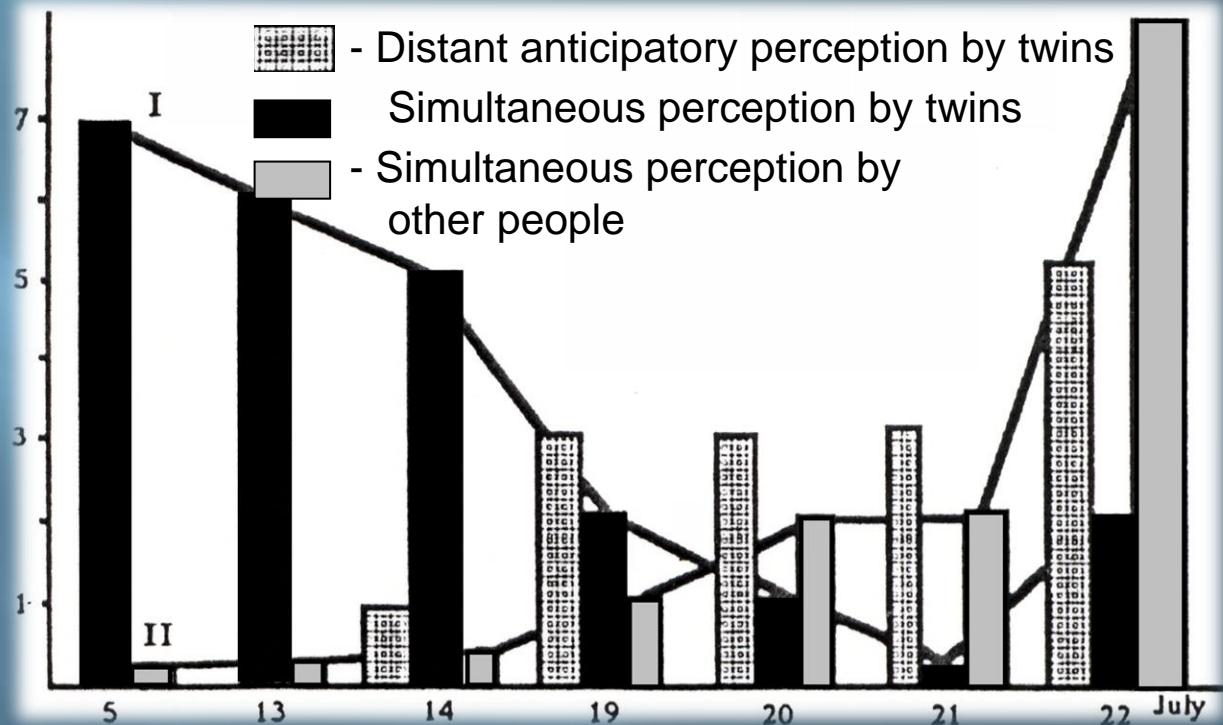

Note: Dark-green color indicate the calculated space of probability of "guessing" (according to Monte-Karlo's method).

The percentage of graphic "alphabet" images correctly perceived in 10 sessions by all participants ($n=4233$). The shadowed part is a "guessing probability corridor". Image numbers used in the sessions are shown on the X-axis.

Based on large statistical massive some mathematically corrective evidences of rapid receipt of information from "Kozyrev's mirrors" zone on the Far North higher 73^0 northern latitude have been got.

.... as well as at researches with operators-twins during the solar eclipse on the Far North on the 22nd of July 1990.

The number of identical image perceived by twins (I) and by other young people (II) during a solar eclipse on 22 July 1990 (Dikson, 1990).

Mirror's experiment of 06.19.2001

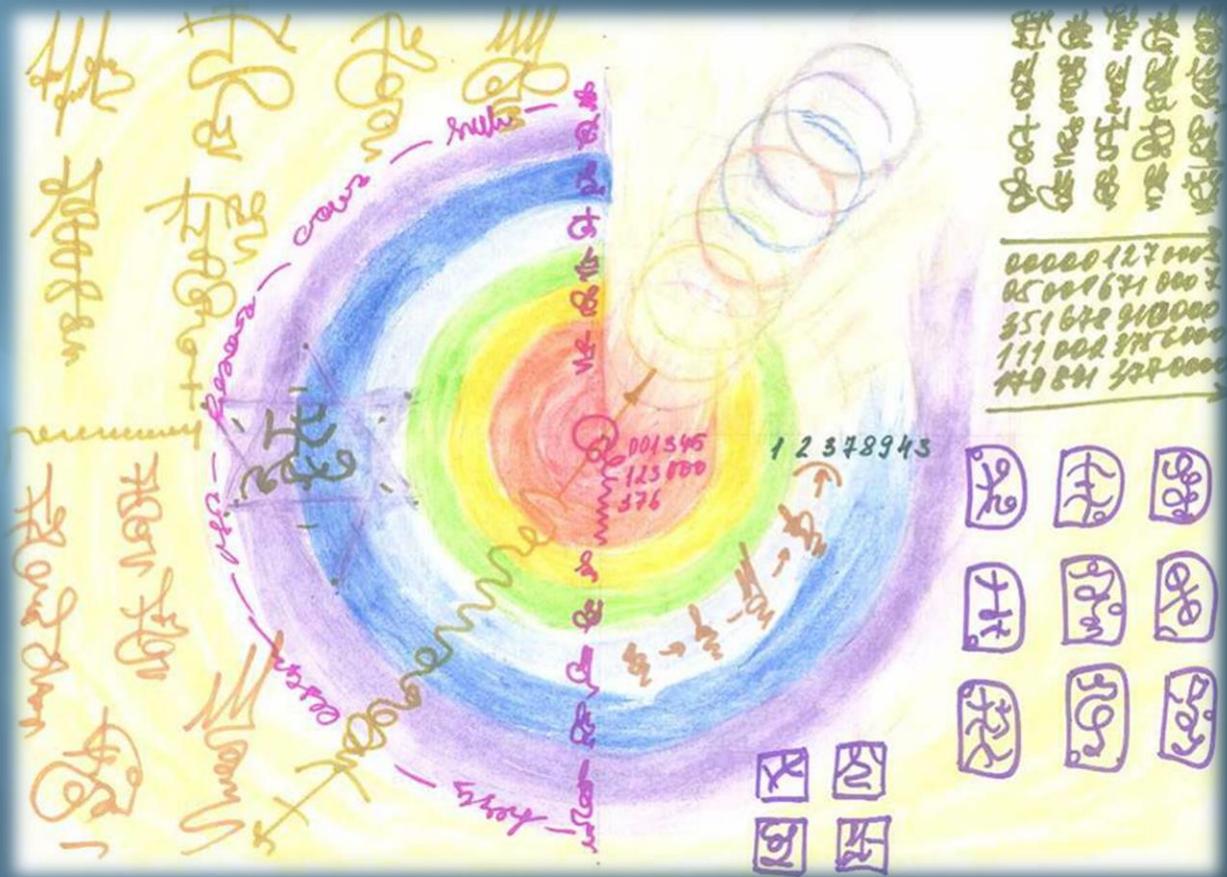

© ISRICA
19.06.2001

At researches,
conducted in 16
years during the
solar eclipse on the
29th of March 2006
using Kirlian-
photopolaroid
survey, there had
fixed conditional
contact of operator
K with unknown
field structures in
“Kozyrev’s
mirrors”.

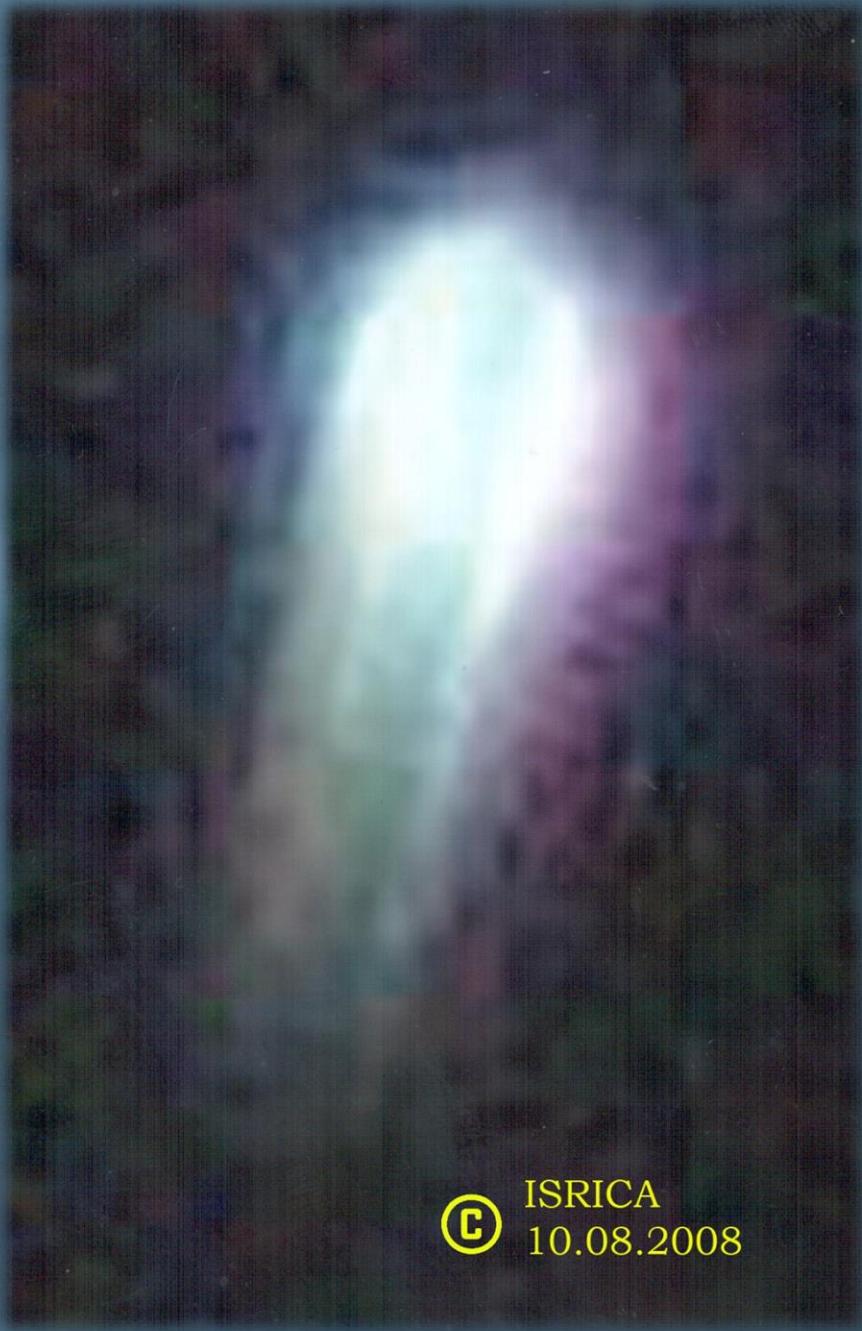

Do not knowing
about results of
Kirlian-survey,
before the
beginning of the
solar eclipse
operator K. had
drawn analogous
volume geometric
figures, accepted
by him.
